Question: 1

Which action, if any, should be taken to forbid Adobe Commerce Admin from performing specific actions?

- A. Enable custom roles In the store configuration, and assign admin user ID(s).
- B. Create a new user role with custom defined resources, and assign It to the admin user.
- C. This action cannot be taken since all admin users must have full access.

Answer: B

Explanation:

This is done by using the Storefront API to create the custom role, and then assigning that role to the admin user. Please refer to the Adobe Commerce Developer Professional Study Manual from adobe.com for more information on creating custom roles and assigning them to users.

Question: 2

How should a grid or form be included in an admin page layout using the UI Component?

- A. `<referenceContainer name='content' >
q <uiComponentname-'Vendor_Module::ui_component/example_listing.xml' />
</referenceContainer>`
- B. `< referenceContainer name="content" >
q <uiComponent name='example_listing.xml' />
</referenceContainer>`
- C. `<referenceContainername='content'>
<uiComponent name='exam ple_listing' />
</referenceContainer>`

Answer: C

Explanation:

This is the correct syntax for including a grid or form in an admin page layout using the UI Component. The examplelisting.xml file is an XML file which contains the configurations and settings for the grid or form. Please refer to the Magento 2 Developer Documentation for more information on how to use UI Components in your admin page layouts.

Question: 3

How should a developer display a custom attribute on the category edit page in the admin panel when a new module Vendor.Category is created?

- A. Create `view/adminhtml/layout/catalog_category_edit.xml` in the module, and then define a block that would display the field for the attribute.
- B. Create `view/adminhtml/ui_component/category_form.xml` file in the module, and then define the field for the attribute.
- C. The field for the attribute will appear automatically.

Answer: B

Explanation:

To display a custom attribute on the category edit page in the admin panel, you need to create a `view/adminhtml/ui_component/category_form.xml` file in the module and define the field for the attribute in it.

Question: 4

Which file should a developer use to set the default value when creating configuration fields for admin?

- A. `etc/adminhtml/system.xml`
- B. `etc/adminhtml/config.xml`
- C. `etc/config.xml`

Answer: C

Explanation:

When creating configuration fields for admin, the default value should be set in the `etc/config.xml` file.

Question: 5

Which command should be used to deploy static content?

- A. `set up:static-content :deploy`
- B. `start:static-resources:deploy`
- C. `startstatic-content:deploy`

Answer: A

Explanation:

To deploy static content, the command "`setup:static-content:deploy`" should be used.
