Question: 1

What is a viewpoint in the context of creating alternate views and viewpoints?

Response:

- A. A specific representation of data using charts and graphs
- B. A user's perspective or role in accessing and interacting with the data
- C. A database management system used for data storage
- D. A backup copy of the data for disaster recovery

Answer: B

Question: 2

What is data governance in the context of governing data across applications?

Response:

- A. A set of policies, processes, and controls for managing and ensuring the quality of data
- B. A data backup and recovery strategy
- C. Encrypting sensitive data fields to protect privacy
- D. Storing data in a centralized repository accessible to multiple applications

Answer: A

Question: 3

What are the benefits of sharing data across applications using APIs?

Response:

- A. Improved data integration and interoperability
- B. Enhanced application performance and scalability
- C. Reduced data redundancy and duplication
- D. Simplified data backup and recovery processes

Answer: A

Question: 4

The Owner permission for an application lets users perform which three tasks?
(Choose three.)

Response:

- A. Modify application registration.
- B. Assign permissions for an application's data objects to other users and groups.
- C. Import viewpoints from external applications.
- D. Manage an application's data objects.
- E. Delete service administrators from an instance.

Answer: ABD

Question: 5

Which HTTP method is typically used to update existing data using requests?

Response:

- A. GET
- B. POST
- C. PUT
- D. DELETE

Answer: C

Question: 6

What are the benefits of synchronizing data across applications?

Response:

- A. Improved data consistency and accuracy
- B. Enhanced application performance and scalability
- C. Reduced data redundancy and duplication
- D. Simplified data backup and recovery processes

Answer: A

Question: 7

Which statement is true about permissions?

Response:

- A. The Owner permission on a view enables a user to configure the view and grants full access to the data objects in that view.
- B. When you grant a permission at a higher level, such as Owner, it includes all of the permissions at lower levels, such as Participant.
- C. Permissions assigned to a dimension do not also apply to the hierarchy sets and node types that they contain.
- D. By default, when you assign the Participant permission to a user or group, their data access is set to Write.

Answer: B

Question: 8

Which two are valid data sources for importing dimensions?
Response:

- A. Tab-delimited files
- B. Registered external applications
- C. Maintenance snapshots
- D. Comma-delimited files

Answer: BD

Question: 9

What is the purpose of using requests to change enterprise data?
Response:

- A. To retrieve data from external APIs
- B. To perform CRUD (Create, Read, Update, Delete) operations on enterprise data
- C. To analyze data using machine learning algorithms
- D. To visualize data in interactive dashboards

Answer: B

Question: 10

Which of the following is a common method for synchronizing data between applications?
Response:

- A. File transfer protocols (FTP)
- B. Virtual private networks (VPNs)

-
- C. Data encryption
 - D. Data replication

Answer: D
