## Question: 1

Huawei remote replication technology is used in a disaster recovery solution and a consistency group is established. Which of the following statements is correct?

A. If the data of a LUN in the consistency group is lost, the data of other LUNs will also become unusable.
B. If the data of a LUN in the consistency group is lost, the data of other LUNs will not be affected in any way.
C. Support up to 4 consistency groups.
D. The LUNs in the consistency group can come from different storage arrays.

**Answer: A**

## Question: 2

What is the correct process sequence for installing CommServe?

A. Install .NET Framework->Firewall configuration selection->Install database->Configure DR path
B. Firewall configuration selection->Install .NET Framework->Install database->Configure DR path
C. Install .NET Framework->Firewall configuration selection->Configure DR path->Install database
D. Install .NET Framework->Install database->Firewall configuration selection->Configure DR path

**Answer: A**

## Question: 3

In the VMware backup scenario, in the non-SAN transmission mode, the backup data is transmitted to the VSA through the ESXi host, and then written to the backup medium through the MA.

A. True
B. False

**Answer: A**

## Question: 4

It is a necessary step to create a consistency group in Huawei's active-standby disaster recovery solution.

A. True
B. False

**Answer: A**

## Question: 5

The peak write bandwidth of an application is 10MB/s, the average write bandwidth is 200KB/s, and the average write IO size is 4KB (the overhead of private information is about 11%, and the bandwidth utilization rate is 70%).
Using FC networking, and set to synchronous remote replication mode (considering the cost of private information), which is the correct requirement for network bandwidth?

A. more than or equal to 128.4Mbps
B. Equal to 128.4Mbps
C. Less than 128.4Mbps
D. Greater than or equal to 64.2Mbps

**Answer: A**

## Question: 6

The parameters to be considered when configuring the backup data retention strategy include the policy selection retention period, retention cycle, and the number of write streams.

A. True
B. False

**Answer: B**

## Question: 7

During data backup, in order to save space, single-selected data may be deduplicated, such as repeated data block A and block B. Only one copy of data will be physically saved, and the corresponding index of block A or B will be deleted.

A. True
B. False

## Question: 8

Which of the following are the disadvantages of choosing cloud storage as a backup medium?

A. Capacity is not easy to expand
B. Backup media needs to be managed
C. Need high bandwidth network
D. Not easy to deploy

**Answer: C**

## Question: 9

In a data backup management system, when the requirements for backup performance are not high, the media server may not be configured separately, and the media server module and the management server module can be installed on the same physical server.

A. True
B. False

**Answer: A**

## Question: 10

Which of the following description of eReplication is incorrect?

A. eReplication is a disaster recovery business management software suite developed by Huawei Technologies Co., Ltd.
B. eReplication is a backup business management software suite developed by Huawei Technologies Co., Ltd.
C. eReplication supports visual management, and the execution status of the protection group and recovery plan is clear at a glance

**Answer: B**
