Question: 1

Cloud Kicks has the following requirements:
• Their Shipment custom object must always relate to a Product, a Sender, and a Receiver (all separate custom objects).
• If a Shipment is currently associated with a Product, Sender, or Receiver, deletion of those records should not be allowed.
• Each custom object must have separate sharing models.
What should an Architect do to fulfill these requirements?

A. Associate the Shipment to each parent record by using a VLOOKUP formula field.
B. Create a required Lookup relationship to each of the three parent records.
C. Create a Master-Detail relationship to each of the three parent records.
D. Create two Master-Detail and one Lookup relationship to the parent records.

Answer: B

Question: 2

Universal Containers (UC) is planning to move away from legacy CRM to Salesforce. As part of one-time data migration, UC will need to keep the original date when a contact was created in the legacy system. How should an Architect design the data migration solution to meet this requirement?

A. After the data is migrated, perform an update on all records to set the original date in a standard CreatedDate field.
B. Create a new field on Contact object to capture the Created Date. Hide the standard CreatedDate field using Field -Level Security.
C. Enable "Set Audit Fields" and assign the permission to the user loading the data for the duration of the migration.
D. Write an Apex trigger on the Contact object, before insert event to set the original value in a standard CreatedDate field.

Answer: C

Question: 3

An architect has been asked to provide error messages when a future date is detected in a custom Birthdate _c field on the Contact object. The client wants the ability to translate the error messages. What are two approaches the architect should use to achieve this solution? Choose 2 answers

A. Implement a third -party validation process with translate functionality.
B. Create a trigger on Contact and add an error to the record with a custom label.

C. Create a workflow field update to set the standard ErrorMessage field.
D. Create a validation rule and translate the error message with translation workbench.

Answer: B, D

Question: 4

What is an advantage of using Custom metadata type over Custom setting?

A. Custom metadata records are not copied from production to sandbox.
B. Custom metadata types are available for reporting.
C. Custom metadata records are deployable using packages.
D. Custom metadata records are editable in Apex.

Answer: C

Question: 5

Get Cloudy Consulting uses an invoicing system that has specific requirements. One requirement is that attachments associated with the Invoice_c custom object be classified by Types (i.e., ""Purchase Order"",
""Receipt"", etc.) so that reporting can be performed on invoices showing the number of attachments grouped by Type.
What should an Architect do to categorize the attachments to fulfill these requirements?

A. Add additional options to the standard ContentType picklist field for the Attachment object.
B. Add a ContentType picklist field to the Attachment layout and create additional picklist options.
C. Create a custom picklist field for the Type on the standard Attachment object with the values.
D. Create a custom object related to the Invoice object with a picklist field for the Type.

Answer: D

Question: 6

Universal Containers has a legacy system that captures Conferences and Venues. These Conferences can occur at any Venue. They create hundreds of thousands of Conferences per year. Historically, they have only used 20 Venues. Which two things should the data architect consider when denormalizing this data model into a single Conference object with a Venue picklist? Choose 2 answers

A. Limitations on master -detail relationships.
B. Org data storage limitations.
C. Bulk API limitations on picklist fields.

D. Standard list view in -line editing.

Question: 7

Universal Container (UC) has around 200,000 Customers (stored in Account object). They get 1 or 2 Orders every month from each Customer. Orders are stored in a custom object called "Order c"; this has about 50 fields. UC is expecting a growth of 10% year -over -year. What are two considerations an architect should consider to improve the performance of SOQL queries that retrieve data from the Order _c object? Choose 2 answers

A. Use SOQL queries without WHERE conditions.
B. Work with Salesforce Support to enable Skinny Tables.
C. Reduce the number of triggers on Order _c object.
D. Make the queries more selective using indexed fields.

Question: 8

Universal Containers (UC) provides shipping services to its customers. They use Opportunities to track customer shipments. At any given time, shipping status can be one of the 10 values. UC has 200,000 Opportunity records. When creating a new field to track shipping status on opportunity, what should the architect do to improve data quality and avoid data skew?

A. Create a picklist field, values sorted alphabetically.
B. Create a Master -Detail to custom object ShippingStatus c.
C. Create a Lookup to custom object ShippingStatus c.
D. Create a text field and make it an external ID.

Question: 9

Universal Containers (UC) management has identified a total of ten text fields on the Contact object as important to capture any changes made to these fields, such as who made the change, when they made the change, what is the old value, and what is the new value. UC needs to be able to report on these field data changes within Salesforce for the past 3 months. What are two approaches that will meet this requirement? Choose 2 answers

A. Create a workflow to evaluate the rule when a record is created and use field update actions to store

previous values for these ten fields in ten new fields.
B. Write an Apex trigger on Contact after insert event and after update events and store the old values in another custom object.
C. Turn on field Contact object history tracking for these ten fields, then create reports on contact history.
D. Create a Contact report including these ten fields and Salesforce Id, then schedule the report to run once a day and send email to the admin.

Answer: B, C

Question: 10

Universal Containers (UC) has an open sharing model for its Salesforce users to allow all its Salesforce internal users to edit all contacts, regardless of who owns the contact. However, UC management wants to allow only the owner of a contact record to delete that contact. If a user does not own the contact, then the user should not be allowed to delete the record. How should the architect approach the project so that the requirements are met?

A. Create a "before delete" trigger to check if the current user is not the owner.
B. Set the Sharing settings as Public Read Only for the Contact object.
C. Set the profile of the users to remove delete permission from the Contact object.
D. Create a validation rule on the Contact object to check if the current user is not the owner.

Answer: A
